SUMMARY

Computer Science student at the University of Louisville (3.62 GPA, graduating May 2028) who ships clean, efficient software — from autonomous AI research agents to quantitative trading models. Comfortable across the stack in Python, C++, and the React/Node ecosystem, with hands-on experience in PyTorch and the Anthropic API. Seeking a Summer 2027 software development internship.

EDUCATION

B.A. in Computer Science *Expected May 2028*
J.B. Speed School of Engineering, University of Louisville — Louisville, KY GPA 3.62 / 4.0
84 credit hours completed. Dean's List: Fall 2024, Fall 2025, Spring 2026.

Technical Certificate, Indiana College Core *Aug 2020 – May 2024*
Ivy Tech Community College GPA 3.6 / 4.0

TECHNICAL SKILLS

Languages: Python, C++, C, C#, TypeScript, JavaScript (expanding: Java, SQL)

Frameworks & Runtimes: React, Node.js, Express

AI / ML: PyTorch, NumPy, Pandas, Anthropic API

Tools & Platforms: Git, GitHub, VS Code, Google Cloud, Linux

FEATURED PROJECTS

Auto-Research for Small Language Models *Python · PyTorch · Anthropic API*

- Built an autonomous ML research loop that trains a small GPT, then lets an AI agent (Claude) read each run's results, rewrite the hyperparameters, and re-run — 20+ self-directed iterations overnight with no human in the loop.
- Created a live browser dashboard streaming real-time loss curves, full experiment history, and the agent's reasoning behind every change.

Smart Meeting Summarizer *React · Node.js · Express*

- Developed a full-stack app that turns raw meeting content into concise summaries, owning the UI, REST API design, and client-server data flow end to end.

Terminal Arcade *Python · Standard Library Only*

- Rebuilt Snake and Tetris from scratch on a custom ANSI rendering engine with threaded input; Tetris ships a 7-bag randomizer, ghost piece, hard drop, and next-piece preview.
- Shipped persistent high scores and cross-platform support with zero external dependencies.

Personal Finance Dashboard *React · TypeScript · CSS*

- Built a type-safe dashboard (70%+ TypeScript) with account balances, summary cards, charts, and transaction history from reusable, modular components.

ProPart1 — Country Data Sorter *C++ · Templates · File I/O*

- Implemented a generic sorted array list (`ASList<T>`) that reads and ranks 191 countries by literacy rate and GDP per capita from CSV — a study in templates and operator overloading.

Additional: IDD Programming Challenge 2026 (TypeScript, GitHub Actions CI) · Password Generator (C++ OOP) · Rock, Paper, Scissors (Python).

OPEN SOURCE

SigmaHQ / sigma — Pull Request #6080 (pending review)

- Pinned the CI test and validation dependencies into dedicated requirements files and added pip caching across the GitHub Actions workflows, so an unrelated upstream release can't break contributor PRs and CI stops re-downloading packages on every run.
- Validated locally on Python 3.14: tests pass, sigma check clean, and no detection rules touched.

INDEPENDENT WORK

Ongoing private projects, primarily in quantitative trading and AI:

- **Quant / Trading** — sports-betting models, prediction-market and Polymarket/Kalshi odds-mispricing analysis, and automated trading bots (Python).
- **AI / Agents** — a personal LLM-development sandbox, an OpenJarvis voice-assistant fork, and a self-developing Hearts of Iron IV AI (C#).

EXPERIENCE

Project Intern — Aqlan Lab Internship Program

May 2026 – Aug 2026

University of Louisville — Louisville, KY (community-engaged, sustainability-focused program)

- Work in a small interdisciplinary team on a community-engaged project addressing a real-world sustainability challenge in the Louisville area.
- Apply design-thinking methods — stakeholder interviews, problem definition, and iterative solution development — to turn community needs into actionable, high-impact plans.
- Combine technical, analytical, and human-centered problem-solving across the project lifecycle to deliver meaningful, lasting local impact.

Crew Member — Taco Bell

Aug 2021 – Present

Floyds Knobs, IN

- Maintained operational efficiency during peak hours as part of a high-performing team, balancing the role with a full course load.
- Handled point-of-sale duties accurately and was entrusted with opening and closing responsibilities.
- Demonstrated reliability and initiative, completing assigned tasks independently and collaborating with management to meet store goals.

LEADERSHIP, HONORS & CERTIFICATIONS

- **First Year Leadership Program (FYLP), University of Louisville** — selected in the top 10% of applicants; built problem-solving and communication skills through project-based challenges.
- **Dean's List, J.B. Speed School of Engineering** — Fall 2024, Fall 2025, Spring 2026 (term GPA 3.5+).
- **Google Cloud** — 3 completion badges (Jun 2026).
- **Anthropic** — 17 certifications (Jun 2026).
