

Andrew Merritt (he/him)

Computer Science Student | Aspiring Software Developer | Quant & AI Enthusiast
Louisville, KY • (812) 972-6266 • a0merr05@louisville.edu • [LinkedIn](#) • [github.com/a0merr](#)

SUMMARY

Computer Science student at the University of Louisville (3.62 GPA, graduating May 2028) who ships clean, efficient software — from autonomous AI research agents to quantitative trading models. Comfortable across the stack in Python, C++, and the React/Node ecosystem, with hands-on experience in PyTorch and the Anthropic API. Seeking a Summer 2027 software development internship.

EDUCATION

B.A. in Computer Science <i>J.B. Speed School of Engineering, University of Louisville — Louisville, KY</i> 84 credit hours completed. Dean's List: Fall 2024, Fall 2025, Spring 2026.	Expected May 2028 GPA 3.62 / 4.0
Technical Certificate, Indiana College Core <i>Ivy Tech Community College</i>	Aug 2020 – May 2024 GPA 3.6 / 4.0

TECHNICAL SKILLS

Languages: Python, C++, C, C#, TypeScript, JavaScript (expanding: Java, SQL)
Frameworks & Runtimes: React, Node.js, Express
AI / ML: PyTorch, NumPy, Pandas, Anthropic API
Tools & Platforms: Git, GitHub, VS Code, Google Cloud, Linux

FEATURED PROJECTS

Auto-Research for Small Language Models - Built an autonomous ML research loop that trains a small GPT, then lets an AI agent (Claude) read each run's results, rewrite the hyperparameters, and re-run — 20+ self-directed iterations overnight with no human in the loop. - Created a live browser dashboard streaming real-time loss curves, full experiment history, and the agent's reasoning behind every change.	Python • PyTorch • Anthropic API
Smart Meeting Summarizer Developed a full-stack app that turns raw meeting content into concise summaries, owning the UI, REST API design, and client-server data flow end to end.	React • Node.js • Express
Terminal Arcade - Rebuilt Snake and Tetris from scratch on a custom ANSI rendering engine with threaded input; Tetris ships a 7-bag randomizer, ghost piece, hard drop, and next-piece preview. - Shipped persistent high scores and cross-platform support with zero external dependencies.	Python • Standard Library Only
Personal Finance Dashboard Built a type-safe dashboard (70%+ TypeScript) with account balances, summary cards, charts, and transaction history from reusable, modular components.	React • TypeScript • CSS
ProPart1 — Country Data Sorter Implemented a generic sorted array list (<code>ASList<T></code>) that reads and ranks 191 countries by literacy rate and GDP per capita from CSV — a study in templates and operator overloading.	C++ • Templates • File I/O
Additional: IDD Programming Challenge 2026 (TypeScript, GitHub Actions CI) • Password Generator (C++ OOP) • Rock, Paper, Scissors (Python).	

OPEN SOURCE

SigmaHQ / sigma — Pull Request #6080 Pinned the CI test and validation dependencies into dedicated requirements files and added pip caching across the GitHub Actions workflows, so an unrelated upstream release can't break contributor PRs and CI stops re-downloading packages on	pending review
---	----------------

every run.

- Validated locally on Python 3.14: tests pass, sigma check clean, and no detection rules touched.

EXPERIENCE

Project Intern — Aqlan Lab Internship Program

May 2026 – Aug 2026

University of Louisville — Louisville, KY | Ohio River Way — “Paddle the Ohio” water-trail initiative

- Conducted field ground-truthing audits of Ohio River public access points across multiple segments (Madison-to-Fishtown and Milton-to-West Point), logging launch conditions, hazards, and amenities into a shared tracker to map a paddling water trail.
- Built and maintained a stakeholder contact database and a live dashboard to coordinate outreach across partner organizations, municipalities, and community groups along the river corridor.
- Produced a reusable outreach email campaign pack and a 48×36 conference poster to communicate audit findings and recruit partners — applying design-thinking methods (stakeholder interviews, problem definition, iterative development) to turn community needs into actionable plans.

Crew Member — Taco Bell

Aug 2021 – Present

Floyds Knobs, IN

- Maintained operational efficiency during peak hours as part of a high-performing team, balancing the role with a full course load.
- Handled point-of-sale duties accurately and was entrusted with opening and closing responsibilities.
- Demonstrated reliability and initiative, completing assigned tasks independently and collaborating with management to meet store goals.

LEADERSHIP, HONORS & CERTIFICATIONS

- First Year Leadership Program (FYLP), University of Louisville — selected in the top 10% of applicants; built problem-solving and communication skills through project-based challenges.
- Dean’s List, J.B. Speed School of Engineering — Fall 2024, Fall 2025, Spring 2026 (term GPA 3.5+).
- Google Cloud — 3 completion badges (Jun 2026).
- Anthropic — 17 certifications (Jun 2026).
